The DUBLE Cryptocurrency Business Profile

About The DUBLE Cryptocurrency

The DUBLE is a decentralized economic development project for the black community worldwide. It focuses on poverty alleviation by creating and distributing unconditional basic income among black communities according to their needs.

Introducing The DUBLE

We will enable the black community to access a basic income through proprietary DUBLE intelligent contracts with specific parameters. Beneficiaries added to that contract can claim a basic income regularly and use it for whatever they need to buy.

For example, a family in Chicago can access $20 (of our project) per week. Every four weeks, they will be able to buy something they need. Or a community center in Detroit that is underfunded could have access to $250 per week for programs and operations. These are just examples; the possibilities are countless due to the need and the potential of digital currency combined with investment.

Impact Measurement

We are also developing a framework to correctly measure the impact (economic development and social improvement) we are causing in this space. Some of the leading indicators of social progress and economic growth are health, education, children's situation, and happiness.

Team Behind the DUBLE Project

The DUBLE is a major blockchain project run by a team of highly professional individuals who have been working with large private organizations and non-governmental organizations. Team DUBLE has designed this project to help and support the masses in a short period.

Decentralized Autonomous Organization (DAO)

This project is going to become a decentralized autonomous organization (DAO) where the users will be able to have access to financial services, including but not limited to microcredit, collective savings, and lending. Thus, the token-owners community can control and direct funds in the DAO with no influence from a central authority. The rules are embedded in the code, so no managers are required, so our organization is free from bureaucracy and hierarchy.

Farming Function

The top management will closely monitor the project's progress and focus on the impact of DUBLE among black communities worldwide. The participants will be able to farm tokens rewards just by donating money.

To improve self-sustainability and prosperity in those communities, we will provide access to more financial services down the road by integrating and leveraging existing Defi (Decentralized Finance) protocols for peer-to-peer financial services on public blockchains, primarily the Polygon blockchain-based financial services and products that operate without the need for centralized institutions.

The DUBLE is a major blockchain project that can significantly impact in the years to come. However, it is essential to engage in partnerships to multiply the effect using minimal resources. We will partner with corporations, non-governmental organizations, and governments fighting poverty to take strong measures toward poverty alleviation.

Technology and Features

Blockchain

The DUBLE is a decentralized development project powered by the Polygon blockchain. The token name is the Dividends for United Black Liberation Economic (DUBLE) Crypto. The DUBLE token will be launched under the **MATIC** standard of smart contracts.

To build black communities, we will use our cryptocurrency to circulate funds (supported through Black Financial institutions and businesses) to support black businesses.

NFT Marketplace

This project will also build an NFT marketplace that will allow users to buy, sell, and trade NFTs. The most advanced NFT standards will essentially power the NFT part of the project. It will work like a Shopify store where the users will pay in cryptocurrency and fiat currency to buy NFTs.
